

If you are going to go along with this NAB petition, I would strongly recommend that you tell them to go up a tree. I travel over 1500 miles per WEEK, NOT driving a Semi but rather a regular car, and when I travel, i like the opportunity to listen to what I want to listen to, music or whatever, which in some areas is NOT available due to nature or local programming. Add to that the fact that when I travel, I can NOT get the information that I NEED to know, like traffic in Boston, New York City or other locations in the North Eastern United States because the radio stations in these areas do NOT have traffic for when I NEED it or want it, or I have to go searching for a station, thus causing a distraction while driving. With the XM radio, I can press a button and there it is, when I NEED it and WANT it, not when the radio station feels like giving me the information
